

## SAFETY ALERT 08-2025

REPORTING A DANGEROUS SITUATION/EVENT FROM WHICH WE CAN LEARN

### GENERAL INFORMATION

COMPANY NAME	BMN
LOCATION/ESTABLISHMENT	General
DATE	July 2025

### DESCRIPTION OF THE SITUATION(S)/EVENTS

Unfortunately, we have had to deal with several cutting incidents in the past period:

1. When cutting open the wrapping film around the pallet, cut in the finger
  2. When adjusting a shelving material, cut into the finger
  3. When picking, the strapband that came loose from the material to be picked was cut.
- These incidents could all have led to more serious injuries.

During our daily work, we often work with materials where a cut hazard is a major risk, such as packaging material or products with sharp edges. For this reason, it is mandatory to wear personal protective equipment (PPE) during our work. Wearing the right PPE and using the right approved tools will significantly reduce the risk of injury.

### RELEVANT PHOTOS OF THE SITUATION(S)/EVENT

### WHAT MEASURES CAN WE TAKE TO PREVENT A RECURRENCE OF THIS INCIDENT?

- Always use the prescribed/mandatory personal protective equipment (PPE) in the right situations.
- You are responsible for maintaining your PPE, regularly check for damage and/or breakage and ask for replacement where necessary.
- Always report an unsafe situation (if possible via the Compass app) and take immediate measures.
- Check whether this situation also occurs in your location and, if necessary, take measures to ensure safety

Ask these three questions:

1. Can this accident be prevented at our location?
2. What systems are in place to prevent this type of accident at our site?
3. Are these systems actually applied?
